DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, and 7-9 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Fukuda '487.

Fukuda teaches a process of germinating rice seeds in a calcium salt solution at 30 degrees C for 7 days (Paragraph 72).

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fukuda '487.

Fukuda does not expressly state that germination occurs in a dark room for a time period in the range of 2 to 5 days. However, It is well settled that

determination of optimum values of cause effective variables such as these process parameters is within the skill of one practicing in the art. *In re Boesch*, 205 USPQ 215 (CCPA 1980).

Claims 1-5 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kurohashi '021.

Kurohashi teaches a process of germinating rice seeds in NaCl solution for 4 days at 30 degrees C (Column 4). The rice seeds are washed and sterilized with sodium hypochlorite before the germination step begins (Column 4).

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kurohashi '021.

Kurohashi does not expressly state that germination occurs in a dark room for a time period in the range of 2 to 5 days. However, it is well settled that determination of optimum values of cause effective variables such as these process parameters is within the skill of one practicing in the art. *In re Boesch*, 205 USPQ 215 (CCPA 1980).

Claims 1-3, and 7-9 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Conner '339.

Conner teaches a process of germinating corn seeds in calcium salt solution for 2 days at 30 degrees C (Paragraph 416). The corn seeds are washed and sterilized before the germination step begins (Paragraph 416).

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Conner '339.

Conner does not expressly state that germination occurs in a dark room for a time period in the range of 2 to 5 days. However, It is well settled that determination of optimum values of cause effective variables such as these process parameters is within the skill of one practicing in the art. *In re Boesch*, 205 USPQ 215 (CCPA 1980).

Allowable Subject Matter

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: It would not be obvious, nor is there motivation to recover the crystals produced from the seed germinating processes of the prior art.
